

Red Panda Facts

Common Name	Red Panda
Where do they live?	Red Pandas are found in the mountain forests of Asia (Nepal, India, Bhutan, China and Myanmar (Burma)).
What do they do and eat?	Red Pandas live in trees and eat bamboo leaves, grass and fruit.
How long do babies live with their mothers?	After 3 months growing in their mother, cubs are born into a nest made of twigs and grass. Newborn cubs are covered in thick gray fur and their eyes and ears are closed. The cubs emerge from the nest at about 3 months of age but stay with their mother until the next breeding season begins.
How long do red pandas live?	In a zoo, red pandas can live up to 14 years. We think they live for around 7-8 years in the wild. They are ready to have babies (cubs) after they are a year old.
Why are they endangered?	Red Pandas are nearly extinct due to the cutting down of the trees where they live.

Interesting Facts

1. The red panda is the **ORIGINAL** panda.
2. The name "Panda" is the Nepalese word for red panda - "Nigalya poonya" - which means "eater of bamboo."
3. The Chinese name for the red panda is hunho or firefox, due to their colour and similar size to a fox. The web browser "**Firefox**" is named after them.
4. Like giant pandas, red pandas have an extra "thumb" which is simply an enlarged bone for grabbing bamboo stems
5. A red panda eats approximately 200,000 bamboo leaves daily.
6. Red Pandas red and black color camouflages them from their predators. The red on their backs is exactly the same color as moss found on the trees where they live. The black on their stomach makes it difficult to see them from below.

How You Can Help

- Adopt-a-Panda
- Become a Red Panda Ranger
- Participate in International Red Panda Day
- Host a Red Panda Party
- Class Project
 - i. Jump Rope
 - ii. Auction
 - iii. Hopping
